Education

Kean University
BFA, Graphic Design
2016 to 2019

Fashion Institute of Technology
Advertising and Marketing Communication
2013 to 2015

So what do you actually do?

I design websites, build them, and explain them to anyone in the room.

A decade-plus in web design and well over a hundred sites launched. I design and develop on any platform or hand-code from a blank file, and I'm the one on the client call scoping what they need and answering the technical questions.

Experience

Senior Web Designer
Dec 2020 to now

BentoBox (acquired by Clover)

- Design and build custom, responsive sites for restaurant and hospitality groups, from visual direction through build, QA and launch, with dozens in flight at once.
- Turn each brand into a distinct site through type, color, photography and layouts built around menus, online ordering, reservations and events.
- Lead design calls directly with owners and marketing teams: scope the requirements, present direction and refine through launch.
- Push past the platform's templates with custom CSS and JavaScript, and set the front-end standards the design team builds to.
- Own the VIP and at-risk accounts and get on the call when a client is unhappy. The team's escalation point for responsive, accessibility and third-party script issues, in an industry where restaurants get sued over small accessibility gaps.
- Mentor a team of designers, run design reviews, and wrote the training docs and platform limitations reference the team builds from.

Owner and Developer
Aug 2020 to now

Beyond Belief Web Design · beyondbeliefwebdesign.com

- Find and pitch local businesses, often with a homepage concept already built, then design and hand-code the site in Astro, deployed through Git and Netlify. No templates or page builders.
- Go from idea straight to code: final copy with AI's help, a rough wireframe of the flow, then the build with the client's brand guide, or a new one I create.
- Connect sites to the tools clients run on, like a lead form with a yes or no approval step that feeds approved leads straight into a home care agency's CRM through its API.
- Run local SEO and analytics: keyword research, site architecture, Google Business Profile, Search Console and monthly reporting.
- Maintain every site (content, speed and accessibility fixes) and walk owners through DNS, hosting and email, then teach them to update it themselves.

Graphic Designer
Jul 2019 to Dec 2020

Internet Creations

- Designed and built Salesforce Community Cloud pages for an enterprise SaaS marketing team.
- Built Marketo landing pages and email templates for campaigns, launches and events.
- Started the company's social media strategy and made launch, event and social assets, plus short videos.
